

## ANY FEEDER

### ANY FEEDER

Anyfeeder is one of the most flexible units in our modular system.

Parts are feded random under the vision kamera field.

The vision system guide the robot to pick position. Robot pick the parts for further inspection or other needs and are very suitable for palletizing.

In above case the feeder are used for palletizing parts on a pallett.

Inspection system also identify the correct side and turns the part for further Pick & Placing.
